DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-13, 26, 29, 32, 33, and 34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gray (US 6,019,745) as modified by Yagita (US 6,089,455).

Gray discloses in Figures 1 and 3 an ampoule (1) comprising a dispensing end (5) and a distal end (2) comprising a surface perpendicular to an axis along dispensing end, the surface comprising two reference recognition elements (16 and 17) written on predetermined concentric positions on the surface of the ampoule. Furthermore, Gray discloses in columns 6 and 7 the recognition elements generate one of electrical and magnetic fields of different strengths.

Gray discloses the claimed invention except for the recognition elements being arranged asymmetrically, and at least one reference recognition element situated on different sized concentric circles, with the angular distance between any two positions (for example X1-A1 and M2) being different than the angular distance between any other two positions (for example X1-A2 and X2-A1). Yagita discloses in Figure 7 that it is known to arrange recognition elements asymmetrically on different sized concentric circles. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system as taught by Gray by arranging recognition elements asymmetrically on different sized concentric circles as taught by Yagita to provide a recognition system for reading and decoding a code on an article (Abstract).

Response to Arguments

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Gray teaches that it is known to use a recognition system on an ampoule. Yagita teaches a recognition system that can be used in medical situation (column 4, line 54 – column 5, line 4). Therefore, it would be obvious for one having ordinary skill in the art to combine these two references.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
